OBJECTIVE

To obtain a software developer position with an organization where I can thrive with opportunities for personal growth and career advancement.

EXPERIENCE

September 2021 - September 2026

Developer • C2IT Consulting, Inc • Plainfield, IN

- Create, update and maintain websites in C#/ASP.NET/Blazor
- Create, update and maintain C# APIs
- Create, update and maintain mobile apps in C#/Xamarin/MAUI/Blazor
- Deploy and release mobile apps through the Apple, Android and Amazon app stores
- Integration with Cursor AI for increased productivity workflow
- Daily SQL Server and Sqlite database use
- Use GitHub and Azure DevOps for source control
- Create, update and maintain CI/CD pipelines utilizing Azure DevOps tools
- Integrate with outside 3rd party systems such as Stripe, Shopify, Google, and Apple

September 2020 - September 2021

Junior Application Developer • Web Connectivity • Lebanon, IN

- Daily SQL database use
- Learned PHP, ColdFusion, and Javascript
- Work with C# Applications using SQL databases
- Use Subversion to commit and receive changes
- Daily FTP and RDP protocol use to access remote machines and code hosted on various servers

October 2012 - May 2016 / March 2018 - June 2020

Shift Supervisor • Starbucks • Seattle, WA / Zionsville, IN / Indpls., IN

- Met customer demand while maintaining a high level of customer service during fast paced work environment.
- Responsible for cash handling including both opening and closing duties.
- Ability to meet deadlines by ensuring closes always went smoothly on my shifts with all tasks being accomplished by closing.
- Helped develop other partners.

EDUCATION

Eleven Fifty Academy
Indianapolis, IN

Graduated 2020
.NET / Software Development

KEY SKILLS

- .NET (FRAMEWORK, CORE, AND MODERN)
- C#
- BLAZOR
- SQL
- CURSOR AI
- STRIPE INTEGRATION
- SHOPIFY INTEGRATION
- HTML/CSS
- AGILE
- BOOTSTRAP
- GIT
- VISUAL STUDIO
- JAVASCRIPT
- JQUERY
- PHP
- CUSTOMER SERVICE

PROJECTS

The Daily Audio Bible, .NET MAUI Blazor Hybrid Mobile & Web Application with supporting APIs

This project is a .NET MAUI Blazor Hybrid Mobile Application coupled with a Blazor Web Application, both of which talk to a back-end .NET API integrating with SQLite and SQL Server. The application uses a combination of

Bootstrap, MudBlazor, and custom-built controls utilizing raw CSS and JavaScript styling. The app streams audio files hosted in Azure Blob Storage and has community engagement features such as message boards and user related data. The app also integrates with both Shopify and Stripe via their respective APIs.

Northern Lights Locating, Xamarin iOS Mobile App, ASP.NET MVC Website, and shared API

This project was built for a locating company integrating an iOS exclusive mobile app built using Xamarin to be used by locators in the field integrating with SQLite for local storage and communicating with a shared API. The system also utilizes an ASP.NET MVC site for admin and management work. The system integrates with native iOS maps and location services, Hangfire, and Twilio

My Truck, Xamarin iOS and Android Mobile App, ASP.NET MVC Website, and shared API

This project was an inventory management solution software built for HVAC and related companies. The system utilized a Xamarin mobile app built for both iOS and Android devices complete with standard mobile and tablet views, utilizing Sqlite for local storage. The other half of the system was a management ASP.NET Web portal. Both projects communicated with a shared API integrating with a back end Sql Server database.

Lore Bridge, .NET MAUI Blazor Desktop App and MCP Host

This project is still in progress and will integrate various different disconnected sources of data into one shared source of truth. The project integrates directly with various other APIs and reads and writes to local storage integrating with Obsidian Vaults. The MCP Host communicates directly to ChatGPT's API and allows users to create notes to be integrated into the local system via ChatGPT commands and allows ChatGPT to call up local data at will. The project includes a fully realized note review system and instructions to guide a user in setting up the software.

The Homebrew Guild, ASP.NET MVC Web Application

This project was a full ASP.NET MVC Web Application utilizing users, rolls, and notifications linked to an SQL database. It was built with C# .NET Framework and styled with CSS/Bootstrap, HTML and JQuery. Users of the Homebrew Guild can create custom content which is linked to their account and available for other users to view.

The Dungeon, C# Console Application, Godot Windows Application

This is a text based adventure game created using C# .NET Framework utilizing custom menus, persistent file storage, and with content generation from an outside text file. The original console application was a jumping off point for a fully realized computer game being built in Godot with C# as the back end scripting language.

OTHER ACTIVITIES / EXPERIENCES

Integrity Core Value Award

Awarded by Eleven Fifty Academy for being genuine, transparent and authentic in every encounter.

Chairman's Club

In 2017 I was ranked one of the top customer service agents in the company, qualifying for one of their highest awards.

Youth Leader

Multiple churches from April 2009-January 2017, Traders Point Christian Church 2023-Current

Audio/Visual Work

I have gained experience and knowledge setting up and running various audio and video equipment.
